P R O C E E D I N G S

**Introductory Remarks**

MR. BARNETT: Welcome to this live video teleconference. I am Mark Barnett of the U.S. Food and Drug Administration and I will be serving as your moderator this afternoon.

Today we are going to talk about two important regulations that are being proposed by the FDA that will help protect our nation against bioterrorism. Both of those regulations concern food and animal feed products regulated by the FDA.

One of the regulations would require the registration of domestic and foreign food and animal feed facilities. The other would require prior notice of imported food shipments into the United States.

Our broadcast today is being received live throughout the United States and South America, and in Canada, Mexico, and the Caribbean. Our audience includes manufacturers, processors, packers, holders, distributors, and transporters of food and animal feed products. In addition, this program is

1 being seen by importers, agents, brokers, and  
2 representatives in various embassies throughout the  
3 world.

4 We have two basic goals in doing this  
5 broadcast. First, we want to be sure that you  
6 understand these proposed regulations, why FDA  
7 proposed them and what they provide for. These  
8 regulations do not impose any requirements on you  
9 right now. They represent FDA's current thinking  
10 on what the final regulations would look like.

11 And that brings me to the second purpose  
12 of today's broadcast, and that is to encourage you  
13 to comment on these proposals before they are made  
14 final. That is very important. By sending us your  
15 comments, you can help to shape these regulations  
16 while they are still being developed.

17 Now, here is how the comment system works.  
18 Under U.S. law, proposed regulations are published  
19 in a document called the Federal Register. This  
20 provides a notice of what a U.S. Government agency  
21 is considering in a particular regulation, and it  
22 allows interested parties to submit comments or

1 suggestions to make the proposed regulation more  
2 effective or less burdensome.

3           Comments on proposed regulations are  
4 accepted for a specified period of time. They are  
5 carefully considered by the government agency  
6 proposing the regulation, and then later they are  
7 summarized and discussed in the preamble section of  
8 the final regulation, which is also published in  
9 the Federal Register.

10           We encourage you to send your comments on  
11 these two regulations to our Dockets Management  
12 Branch, either electronically or by mail.  
13 Throughout the broadcast today, we will be giving  
14 you information on how to do that.

15           You can also find information on how to  
16 submit comments by going to our Bioterrorism web  
17 page. Only comments submitted on time to our  
18 Dockets Management Branch are considered to be  
19 official comments.

20           Now, let me talk a little bit about the  
21 format for today's program. We are going to have  
22 two panels of FDA experts, the first one on

1 Registration of Facilities, and the second panel on  
2 Prior Notice of Imported Food Shipments.

3 We will have a 10-minute break between the  
4 panels and during the break, you will see important  
5 information on your screen about how to submit  
6 comments on these two regulations to our Dockets  
7 Management Branch.

8 I will be asking the panelists questions  
9 on what you will need to know about the proposed  
10 regulations. You will also have the opportunity to  
11 ask questions of the panelists, either by phone or  
12 fax or e-mail.

13 The phone number to call is  
14 1-800-527-1401, the fax number is 1-888-361-4011,  
15 and the e-mail address is tvquestion@cdhrh.fda.gov.  
16 Now, those numbers will be appearing on your screen  
17 right now, and they will reappear from time to time  
18 during the broadcast.

19 We can accept faxed or e-mailed questions  
20 in either English, Spanish, or French. If you  
21 choose to phone us, we can take only calls in  
22 English. Now, you have two choices for phone

1 calls, you can ask your question to the panelist  
2 directly on the air or you can leave your question  
3 with the person answering the phone, and it will be  
4 given to us along with the faxes.

5 Let me clear up a possible point of  
6 confusion about your questions. During this  
7 broadcast, we are encouraging you to ask questions  
8 of our panelists to be sure you understand the  
9 regulations, but you cannot use your communication  
10 with the panelists today as a means of submitting  
11 your comments on the two regulations.

12 As I said earlier, you have to send those  
13 comments either electronically or by mail to our  
14 Dockets Management Branch, and you will get  
15 information on how to do that during the break.

16 Before I introduce the first panel, I  
17 would like you to hear a few words of introduction  
18 from the Commissioner of the U.S. Food and Drug  
19 Administration, Dr. Mark McClellan.

20 DR. McCLELLAN: Last year, the President  
21 and Congress enacted legislation in recognition of  
22 the fact that we live in a new era, an era in which

1 there are real threats of terrorism to this nation.  
2 Those threats include potential dangers to our food  
3 supply. We now worry about food security, not just  
4 food safety, and the legislation included  
5 provisions to help prevent and respond to an attack  
6 on our food supply.

7 They included four specific components  
8 that will lead to new FDA regulations: First, a  
9 regulation on the registration of food producers,  
10 processors, and distributors; second, a regulation  
11 on prior notice of shipments of food coming into  
12 the country; third, a regulation on recordkeeping  
13 requirements; and, finally, a regulation on  
14 administrative detention.

15 I believe that meeting the new challenge  
16 of keeping our food supply secure in the face of  
17 terrorist threats is one of the most important  
18 challenges facing the agency today. The FDA is  
19 fully committed to implementing the new regulations  
20 that follow from this legislation by the statutory  
21 deadline of December 12, 2003.

22 I also know that this new legislation and

1 the regulations will have a significant impact on  
2 the way that business is conducted nationally and  
3 worldwide, and we are fully committed at the FDA to  
4 making sure that we implement these regulations  
5 effectively and in the lowest cost manner possible.

6 All of us, food producers, processors,  
7 distributors, importers, consumer groups,  
8 government agencies responsible for food safety,  
9 all of us have a vital stake in the success of this  
10 effort. The American people are counting on us to  
11 meet the challenge of keeping our food supply  
12 secure.

13 I want to thank you for participating in  
14 today's teleconference and I want to let you know  
15 that we at FDA look forward to working with you to  
16 meet this critical new challenge.

17 **Panel I**

18 **Registration and Facilities**

19 MR. BARNETT: We are back live and now for  
20 our first panel on Registration and Facilities. It  
21 is important to remember that this proposed  
22 regulation would require U.S. and foreign

1 facilities that manufacture, process, pack, or hold  
2 food for human or animal consumption in the U.S. to  
3 register with the FDA, so this panel is going to be  
4 of particular interest to them.

5 Let me introduce our panelists.

6 Bob Lake is director of the Office of  
7 Regulations and Policy in the FDA's Center for Food  
8 Safety and Applied Nutrition.

9 Leslye Fraser is associate director for  
10 Regulations in that office.

11 Lana Ogram is director of the Division of  
12 Compliance Policy in the Office of Enforcement with  
13 FDA's Office of Regulatory Affairs.

14 Dr. Ray Russo is director of the Division  
15 of Software Engineering Services in FDA's Office of  
16 Management and Systems.

17 Bob, let me begin my asking you about the  
18 timing for this. I know that these two regulations  
19 were right up to the wire, that scheduling was very  
20 tight. As of yesterday, they were not published or  
21 about to be published or whatever.

22 Where do we stand right now at this

1 moment?

2 MR. LAKE: Both documents, Mark, have now  
3 been cleared for publication. Both documents that  
4 we will be talking about this afternoon were put on  
5 display at the Federal Register this morning, and  
6 by the beginning of this broadcast, they were also  
7 supposed to be put on FDA's web site, as well, so  
8 they are now publicly available.

9 MR. BARNETT: Thank goodness, for this  
10 broadcast.

11 Anyway, let me ask you to begin by talking  
12 about why FDA is requiring this registration  
13 regulation.

14 MR. LAKE: Well, first, as the  
15 Commissioner just noted a moment ago, the new  
16 Public Health Security and Bioterrorism  
17 Preparedness and Response Act of 2002, which we,  
18 for short, simply refer to as the Bioterrorism Act,  
19 specifically requires that we publish these  
20 proposals that we are talking about this afternoon,  
21 as well as others.

22 But in addition to that, the more

1 meaningful understanding of what they do is that  
2 the registration proposal, along with the others,  
3 will better enable FDA to respond to situations  
4 where there is a foodborne outbreak and to then get  
5 the dangerous food off the market as quickly as  
6 possible.

7           The other benefit that we see in the  
8 registration is that it will enable FDA to more  
9 quickly contact the various segments of the  
10 industry when that becomes necessary. For example,  
11 if we received information indicating that there  
12 was a credible threat of a terrorist act against a  
13 particular set of food industries or types of  
14 facilities, this registration information would  
15 enable FDA to quickly contact those facilities and  
16 pass on the information they would need to protect  
17 themselves.

18           MR. BARNETT: It is really two-way  
19 communication then, the FDA is getting information,  
20 but then it is quickly passing it back to the  
21 industry as a result of this.

22           MR. LAKE: We see both of these as being

1 of value, yes.

2 MR. BARNETT: Leslye, let me ask you, who  
3 is it that has to register under the proposed  
4 regulation?

5 MS. FRASER: Mark, both the Bioterrorism  
6 Act and the proposed rule would require owners,  
7 operators, or agents in charge of domestic or  
8 foreign facilities that manufacture, process, pack,  
9 or hold food for human or animal consumption in the  
10 United States to register with the FDA.

11 The proposed rule includes definitions for  
12 each of these terms, but briefly, manufacturing and  
13 processing we are defining together as combining  
14 one or more ingredients into a food product.  
15 Packing is placing food into a container without  
16 changing the form of the food, and holding could  
17 also be considered storing, such as in a warehouse,  
18 a silo, or a grain elevator.

19 With respect to domestic facilities, they  
20 would have to register if they manufacture,  
21 process, pack, or hold food even if that food does  
22 not enter interstate commerce.

1 MR. BARNETT: Lana, a lot of facilities  
2 and firms are already registered either with the  
3 FDA or with another government agency.

4 If they are already registered in that  
5 way, do they have to do this again?

6 MS. OGRAM: Yes, they do. The  
7 Bioterrorism Act requires that facilities register  
8 with the Food and Drug Administration even if they  
9 have previously registered with FDA or other  
10 government agencies under other requirements, and  
11 there are a couple of reasons for this.

12 One is that information submitted under  
13 other registrations can vary quite significantly,  
14 and those registrations would not be for the  
15 purpose that this one is, and that is for  
16 administration under the Bioterrorism Act.

17 Another very important reason is that this  
18 information must be quickly accessible to FDA in  
19 the event of an emergency. If that data is owned  
20 by another government agency, there could be delays  
21 in accessing it.

22 MR. BARNETT: And, of course, speed is

1 really a key for this particular purpose in  
2 bioterrorism.

3 MS. OGRAM: Extremely important.

4 MR. BARNETT: Leslye, you used the word  
5 facility. Define that so people can understand that  
6 as opposed to similar words.

7 MS. FRASER: We are proposing a definition  
8 of facility as a structure or structures in one  
9 general physical location under one management, or  
10 in the case of a mobile facility, one that travels  
11 to multiple locations, and again it is a facility  
12 that manufactures, processes, packs, or holds food  
13 for human or animal consumption in the United  
14 States.

15 MR. BARNETT: If I am a company and I have  
16 several facilities in several parts of the country,  
17 can I register once as company or do I need to  
18 register for every one of those facilities?

19 MS. FRASER: You would need a registration  
20 for each facility whether, as a company, you have  
21 those facilities in the United States or worldwide.

22 DR. RUSSO: Mark, in order to make that

1 easier, the electronic Internet-based registration  
2 system is being designed so that an owner of  
3 multiple facilities can complete a registration  
4 form for each facility without having to re-enter  
5 any item that is the same for all the facilities,  
6 like, for example, the name of the owner of the  
7 facility.

8 MR. BARNETT: Leslye, does that include  
9 facilities for all foods?

10 MS. FRASER: Most foods. There are some  
11 foods that are regulated by the U.S. Department of  
12 Agriculture, and that is meat and poultry and egg  
13 products, and the facilities that are exclusively  
14 dealing with those food products would not be  
15 subject to these requirements.

16 Facilities, though, that are  
17 manufacturing, processing, packing, or holding food  
18 under FDA's jurisdiction would have to register,  
19 and if a facility has food that is under FDA  
20 jurisdiction and USDA's jurisdiction, they also  
21 would have to register.

22 MR. BARNETT: They still have to register.

1 Well, we have narrowed it down now,  
2 Leslye, to FDA-regulated foods, but for those  
3 people who don't know what those foods are, can you  
4 give us some examples? It's a pretty broad  
5 spectrum.

6 MS. FRASER: It is a broad spectrum. What  
7 is important to remember is that the Bioterrorism  
8 Act amended FDA's current statute, the Federal  
9 Food, Drug, and Cosmetic Act, and that Act has a  
10 definition of food that FDA has implemented for  
11 many years, and that is the one that applies here.  
12 Namely, that definition is food is defined as  
13 articles used for food or drink for man or animals,  
14 chewing gum, and components of these animals.

15 What you will see in the proposed rule is  
16 just to make sure everyone understands the scope  
17 and the breadth of the food that FDA regulates. We  
18 have included a number of examples, and I will kind  
19 of go through them fairly slowly - fruits and  
20 vegetables, fish and seafood, dairy products, eggs,  
21 raw agricultural commodities for use as food or  
22 components of food, canned foods, animal feed

1 including pet food, food and food ingredients.

2 Food also includes food additives  
3 including substances that migrate into food from  
4 packaging and other articles that contact food,  
5 dietary supplements and dietary ingredients are  
6 considered food, as is infant formula, beverages  
7 including alcoholic beverages and bottled water,  
8 live food animals, such as hogs or elk, and then my  
9 personal favorite, bakery goods, snack foods and  
10 candy.

11 MR. BARNETT: Okay. Now, you said that  
12 facilities that work with FDA-regulated foods have  
13 to register, those with USDA-regulated foods don't,  
14 but there are other exceptions, aren't there? Are  
15 there facilities that don't have to register  
16 besides that?

17 MS. FRASER: Yes, there are. The proposed  
18 rule does include a number of other exemptions that  
19 were provided in the Bioterrorism Act, and as you  
20 will see on this slide, they include farms, retail  
21 food operations that sell food directly to  
22 consumers, restaurants, and this includes things

1 like cafeterias, bistros, and what you would  
2 normally think of as restaurants, and then by  
3 analogy, because the food includes animal feed,  
4 facilities that serve food to animals, like pet  
5 shelters, would be exempt as, quote "a restaurant."

6 Nonprofit food operations are exempt,  
7 fishing vessels that do not process fish would be  
8 exempt, and then there is a provision that if you  
9 are a foreign facility that manufactures,  
10 processes, packs, or holds food, and food from your  
11 facility goes to another foreign facility for  
12 further processing or packaging before it comes to  
13 the United States, that first foreign facility  
14 would not have to register.

15 MR. BARNETT: Now, that last one is very  
16 interesting and it may lead to some questions from  
17 our audience.

18 If I am the first processor in a series of  
19 processing steps, how do I know whether I am exempt  
20 because the next person does the significant  
21 processing, or how do I know, conversely, that I am  
22 the last step and therefore I should be

1 registering?

2 MS. FRASER: That's a good question. We  
3 have two slides that sort of give an example of  
4 this. Basically, you would know because you would  
5 know what is the form of the food that you are  
6 making, and you would know where you are sending  
7 the food.

8 So, if you look at the top example, we  
9 have the first foreign facility, and it is making a  
10 food product. If that facility packages it itself,  
11 and then sends it to the United States, well, then  
12 it is basically the last foreign facility that has  
13 done a major activity to that food is the one that  
14 has to register.

15 But if, instead, the foreign facility  
16 takes its food product and it sends it to a  
17 different foreign facility, either in its country  
18 or another country outside the United States, and  
19 then that facility does some further processing,  
20 and then they send that food product or food  
21 ingredient to the United States, then, the first  
22 foreign facility would not have to register because

1 it is not the last in that chain.

2 If we go to the next slide, you will see  
3 that, you know, we kind of succinctly summarized  
4 it, that if you are manufacturing or processing a  
5 finished food product, and you are a foreign  
6 facility, you register.

7 If you are packing or holding a food  
8 product or food ingredient, you register, but if  
9 you are manufacturing or processing a food or a  
10 food ingredient, and it is going to another foreign  
11 manufacturer, then, you are exempt.

12 MR. BARNETT: Okay. What about a facility  
13 that does a mixture of activities, that is, some of  
14 them would fall into the category of exempt, some  
15 of them would fall into the category of register,  
16 they have to register then?

17 MS. FRASER: Yes, they would have to  
18 register that part of their activity that would be  
19 subject to FDA's jurisdiction or has a covered  
20 activity. An example of this could be a grocery  
21 warehouse that sells food to consumers directly,  
22 but it also may sell food to other retailers, maybe

1 the mom and pop shops. In that case, they would  
2 have to register that part of their facility that  
3 is not selling food directly to consumers, because  
4 in the proposed rule, we define a retail facility  
5 as one that sells food directly to consumers only.

6 MR. BARNETT: Let me give you another  
7 example. Suppose I am a farmer, I grow oranges,  
8 and some of those oranges are converted on my  
9 facility, on my farm, to orange juice, do I  
10 register?

11 MS. FRASER: That is a little more  
12 difficult to answer, and it is going to turn on  
13 what you are doing with the orange juice. The farm  
14 aspect, the farming activities are exempt, and most  
15 farms will remain exempt because they are engaged  
16 in traditional farming activities.

17 In the proposed rule, as you will see on  
18 the slide, we defined a farm as a facility in one  
19 general location, that is devoted to the growing of  
20 crops or the raising of animals, or both, and  
21 animals does include seafood, so fish ponds would  
22 be considered a farm.

1           There are some other examples of farms,  
2 like apple orchards, hog farms, fairy farms, feed  
3 lots, and so forth, so it depends as a farm. If  
4 you are a farm and you are doing traditional  
5 activities of packing and holding food that you  
6 grow on the farm or raise on the farm, if you are  
7 consuming all the food on that farm, you are still  
8 exempt, or, in your case, with the orange juice,  
9 if you are manufacturing and processing the oranges  
10 you grow on your farm, and making orange juice on  
11 the farm, but you are still consuming all of the  
12 juice on the farm or another farm that you own, we  
13 still would say you are exempt from registering.

14           Where it would get to the point that you  
15 would be covered is if you take your oranges and  
16 then process them into orange juice on the farm,  
17 and you sell it to a distributor who would then  
18 sell it into commerce.

19           MR. BARNETT: Then, you register.

20           MS. FRASER: Then, you register because  
21 now you are a processor, you register the orange  
22 juice facility, the farm still remains exempt.

1 MR. BARNETT: Right. We are talking so  
2 far, Leslye, about who has to register, but now I  
3 want to talk about what information do you have to  
4 provide when you register.

5 MS. FRASER: The information that you have  
6 to provide is taken from the Bioterrorism Act in  
7 large part, and the information that is required is  
8 the name of the facility, its full address, the  
9 phone number, the fax number if it's available, and  
10 an e-mail address if the facility has one. If the  
11 facility is owned by a parent corporation, then, we  
12 need that same information for the parent  
13 corporation.

14 We also would look from the facility for  
15 the emergency contact person's information, and  
16 that would include the name, their title, their  
17 office number, their home phone number, and their  
18 cell phone number if they have one, and e-mail  
19 address.

20 Again, as it says, this is for use in  
21 emergencies, and as Lana was talking about and Bob  
22 was talking about earlier, if we have a threat that

1 we know about, actual or threatened, on a  
2 particular facility or a particular food product,  
3 we want to be able to get into touch with the  
4 contact people at these facilities.

5           You will see in the proposed rule that the  
6 emergency contact person does not have to be at the  
7 facility. A company, for example, could choose to  
8 have a senior corporate official who is responsible  
9 for all emergency operations be listed there.

10           They also need to provide a statement that  
11 everything they provided is true and accurate, and  
12 that person registering is authorized by the  
13 facility to do so.

14           Then, the last requirement is for foreign  
15 facilities, the Bioterrorism Act requires them to  
16 have a United States agent, and so we ask for  
17 information of their U.S. agent.

18           MR. BARNETT: To talk about the U.S.  
19 agent, anybody can't be a U.S. agent. What are the  
20 qualifications?

21           MS. FRASER: The qualifications that we  
22 are including in the proposed rule are similar to

1 the ones that we have for U.S. agent in our drug  
2 regulations that are existing now, and those are  
3 that the person has to reside or maintain a place  
4 of business in the United States. Other than that,  
5 the facility can choose the person that they want  
6 to be their United States agent who meets those  
7 qualifications.

8 MR. BARNETT: Now, all of the information  
9 you have talked about so far is required under the  
10 regulation, but I am sure there is information that  
11 the FDA would like to have voluntarily that might  
12 help in the event of a bioterrorism attack.

13 If so, if people want to provide that,  
14 what would it be, for example?

15 MS. FRASER: That is correct, Mark. We  
16 are asking for additional information, some of  
17 which FDA is asking for because it will assist us  
18 in communicating with facilities, not just in the  
19 event of an emergency, but say, for example, we  
20 have new regulations or guidance documents coming  
21 out, we can communicate directly with the affected  
22 facilities about those requirements or suggestions

1 that we are providing.

2 Other information that we are asking for  
3 in the optional category is information that is  
4 responding to comments we receive during the early  
5 outreach period we conducted from facilities, so I  
6 will go through those in a little bit.

7 The point I want to underscore is that  
8 this information is in addition to what is  
9 required, it does not replace what is required.

10 But what we have asked for is preferred  
11 mailing address. This is something a facility or a  
12 firm can choose to provide. A number of companies  
13 told us that they want to have corporate  
14 headquarters, for example, register all of their  
15 facilities, so this would allow them to list the  
16 mailing address that would be the place we would  
17 contact.

18 Type of activity, we are asking for the  
19 facility to let us know whether they manufacture,  
20 process, pack, or hold food, and again, if we have  
21 a threat that it is a manufacturing plant of canned  
22 vegetables, we would be able to target our

1 communications there.

2 Additional food product categories, the  
3 Bioterrorism Act limits the categories to those  
4 that are in our existing regulations, yet, there  
5 are additional foods that would be important for us  
6 to know about that aren't in those regulations, and  
7 they include dietary supplements, infant formula,  
8 and animal feed. So, we are asking facilities to  
9 provide that information to us.

10 Type of storage addresses warehouses. We  
11 are asking them to tell us are they a cold storage  
12 or what kind of storage facility, and again it is  
13 to help us target our communications.

14 The most all food product category again  
15 is in response to what facilities requested.  
16 Rather than have to check off many categories if  
17 they handle many food products at their facility,  
18 they can choose to check this one box and skip over  
19 the other mandatory. That is the one place where  
20 they would not have to complete the mandatory  
21 section.

22 Then, lastly, we are asking that if a

1 facility is a seasonal business, for example, it is  
2 only open in the summer, to let us know because  
3 that way when we are targeting communications, we  
4 would know that they are not open at that time.

5 MR. BARNETT: Okay. Let me pause for a  
6 moment and talk to our audience. If you have any  
7 questions about registration, send them in now.  
8 You have got the phone and fax and e-mail  
9 addresses.

10 We have about 30 more minutes for this  
11 panel, so you still have time to get questions in.  
12 I urge you to do that, and the number is on the  
13 screen right now, so get your questions to us.

14 In the meantime, I will continue with my  
15 questions and that is, to ask you, Leslye, what is  
16 the deadline for registration?

17 MS. FRASER: The Bioterrorism Act requires  
18 all facilities to be registered with the FDA no  
19 later than December 12th of this year.

20 MR. BARNETT: But when they can register,  
21 when can they start registering?

22 MS. FRASER: Our goal is to have

1 facilities begin registering on October 12th of  
2 2003. Our intent is to publish a final rule and  
3 have our electronic system operational by that  
4 date, and we will publish the final rule in the  
5 Federal Register.

6 If for some reason we are unable to  
7 complete the final rule or the electronic system  
8 isn't operational then, we still will publish a  
9 notice in the Federal Register that lists the  
10 mailing address where registrations should be sent  
11 since again the Act requires all facilities to be  
12 registered even if we fail to issue regulations on  
13 time.

14 Lastly, I will just note that we do not  
15 want any registrations at this time. We will not  
16 accept the registrations that come in before we  
17 publish that final notice or rule.

18 MR. BARNETT: Ray, we have talked about  
19 what kind of information to provide and when to  
20 provide it. Now, let's talk about how and where a  
21 person registers. How do you do it?

22 DR. RUSSO: Well, Mark, electronic

1 registration via the Internet is FDA's preferred  
2 method. Electronic registration will benefit both  
3 food facilities and FDA in a number of ways.

4 The electronic system will accept  
5 registration forms 24 hours a day, 7 days a week  
6 from anywhere in the world via link off the FDA web  
7 site. The electronic system will help people  
8 prepare correct forms for submission. For example,  
9 the electronic system will not allow someone to not  
10 complete all the required forms.

11 MR. BARNETT: So, it almost assures that  
12 you do it right.

13 DR. RUSSO: To some extent, yes, it will  
14 be a help. Probably most important for registrants  
15 will be the fact that the electronic system will  
16 provide confirmation of registration and the  
17 registration number immediately.

18 So, electronic registration should be  
19 relatively simple and quick.

20 MR. BARNETT: Now, what if I am a firm  
21 that can't access the Internet for some reason?

22 DR. RUSSO: Well, Mark, in this era of

1 globalization, most facilities, both domestic and  
2 foreign, have access to the Internet, usually  
3 within their own company, but also through public  
4 libraries, schools, Internet cafes, commercial copy  
5 centers, but if it does turn out that a facility  
6 does not have reasonable access to the Internet,  
7 FDA will accept paper registrations.

8 Registrants should be aware, however, that  
9 the paper process could be slow. It could take  
10 several weeks, even several months, to get a paper  
11 registration processed depending on the mail  
12 systems involved and the number of paper forms that  
13 FDA has to process.

14 I mean, to illustrate, a facility would  
15 have to acquire the paper form, fill it out and  
16 mail it in. It has to come through the mail system  
17 to FDA, where it has to be received, opened, it has  
18 to be evaluated for correctness. If it is  
19 incomplete or illegible, FDA will have to mail it  
20 back to the facility, will have to travel back  
21 through the mail system. You are going to have it  
22 open it, correct it, send it back in again, so it

1 will come again for reevaluation of correctness.  
2 If it is again not correct, then, it would repeat  
3 that process.

4 If it is correct, FDA still has to prepare  
5 a confirmation notice and a registration number and  
6 mail it back to them. In addition, things often,  
7 well, sometimes will get lost in the mail or in  
8 handling, so there is some uncertainty with that.

9 That is why FDA's preferred method is the  
10 electronic registration system, which should be  
11 more certain and certainly simpler and quicker.

12 MR. BARNETT: Leslye, it is abundantly  
13 clear from what Ray just said that the paper method  
14 of registration is probably not desirable. Now, if  
15 I am a firm that despite the fact that there is an  
16 Internet cafe, I can't get to the Internet for some  
17 reason, is there a way that I can avoid paper  
18 registration, and not use the Internet myself?

19 MS. FRASER: Yes, FDA was very concerned  
20 of being able to make sure all facilities, both  
21 domestic and foreign, could register electronically  
22 as much as possible, so one of the things that we

1 have done is allow a foreign facility, at their  
2 choosing, to designate their United States agent as  
3 their agent in charge for purposes of registering  
4 the facility.

5           So, in this case, the facility could send  
6 their information to their U.S. agent, whether it  
7 is by mail or by fax, but they would send it to  
8 their United States agent, and again that person  
9 has to reside or maintain a place of business in  
10 the U.S., so they could go to the same places that  
11 Ray was talking about, the Internet cafes, the  
12 public libraries if they didn't have Internet  
13 themselves, and thereby register electronically and  
14 receive a faster receipt of confirmation than  
15 waiting to have it come through FDA.

16           One thing that we recommend in the  
17 proposal, it is not a requirement, but we do  
18 recommend that foreign facilities that choose to  
19 authorize their U.S. agents to act in this manner,  
20 to sign a written agreement with that agent for  
21 their own protection and the agent's protection, so  
22 the duties are clearly specified, and FDA does not

1 need to see a copy of that agreement.

2 MR. BARNETT: Ray, what about a fee for  
3 registration?

4 DR. RUSSO: There is no fee, Mark.

5 MR. BARNETT: Let's talk about updating  
6 registrations, things change, information changes,  
7 and I am sure that the FDA wants up-to-date  
8 information.

9 How do you do updates and when do you do  
10 them?

11 DR. RUSSO: Good question, Mark. FDA is  
12 proposing that any previously submitted  
13 registration form be updated within 30 days of any  
14 change to its information. If a facility is  
15 canceling its registration, it must submit a  
16 cancellation of registration form.

17 Both of these, the update and the  
18 cancellation of registration can be done  
19 electronically.

20 MR. BARNETT: Bob, talk about the  
21 significance a little bit about getting your firm  
22 registered with the FDA. Does this in some way

1    imply an approval or sanction by the agency of this  
2    particular facility?

3            MR. LAKE:  No, Mark, it does not.  The  
4    fact that the FDA has issued a registration number  
5    does not mean--well, it only means that we have  
6    actually received the information and that it's  
7    complete, and have given a number.  It does not in  
8    any way mean that we have evaluated the facility or  
9    its products.  It in no way constitutes an  
10   endorsement of the facility or its products.

11           MR. BARNETT:  Lana, so far we have talked  
12   about who has to register, we have talked about the  
13   kinds of information, we have talked about how to  
14   register, how to change the information.  Let's now  
15   start talking about the other end of that, and that  
16   is, what is FDA going to do with the information.

17           MS. OGRAM:  As Bob mentioned earlier, it  
18   will allow the agency to rapidly notify any  
19   affected facility in the event that FDA receives  
20   information about a potential contamination of a  
21   food or in the event of an outbreak of a foodborne  
22   illness.

1           In addition to that, it will help FDA to  
2 work more effectively with other agency  
3 counterparts on a federal, state, and local level,  
4 as well as the affected facility and its  
5 distribution system, to prevent the contamination  
6 or to limits its impact on the public.

7           MR. BARNETT: One of the things that some  
8 firms I know are going to be worried about is when  
9 they submit this registration material to the FDA,  
10 is that going to be made available to the public?

11          MS. OGRAM: No, the Bioterrorism Act  
12 specifically states that this information in the  
13 registration system, which would include the  
14 identity of a facility or its location, will not be  
15 available to the public under the Freedom of  
16 Information Act.

17          MR. BARNETT: What about the possibility  
18 that the FDA could share the information with  
19 another government agency or with the states?

20          MS. OGRAM: That is definitely possible to  
21 do, and that is not considered a sharing of  
22 information with the public. FDA can share that as

1 long as we follow our regulations and procedures  
2 under this area.

3 MR. BARNETT: Well, I know that firms will  
4 be now asking the question, how do we know that the  
5 other federal agency or the state isn't going to,  
6 in turn, share that with the public, make it  
7 public?

8 MS. OGRAM: That's a very good question,  
9 and our regulations do require that we obtain  
10 written assurance from the agency receiving the  
11 information that they will maintain the  
12 confidentiality of the commercial or trade secret  
13 information that we provide to them.

14 MR. BARNETT: Well, let's talk about  
15 consequences now. What happens if FDA finds out  
16 that a facility is not registered?

17 MS. OGRAM: The Bioterrorism Act, in  
18 addition to the other provisions of the Food, Drug,  
19 and Cosmetic Act, give us a number of enforcement  
20 tools to deal with the situation in which a  
21 facility has failed to register.

22 The Bioterrorism Act specifically makes

1 failure to register a prohibited act, and then the  
2 other provisions of the Food, Drug, and Cosmetic  
3 Act give us the authority to file a civil or a  
4 criminal action against an individual who has  
5 committed a prohibited act, and that might take the  
6 form of an injunctive action or a prosecution.

7 MR. BARNETT: What happens if an import  
8 arrives and there is no registration for that  
9 company, but the material is here, it's at the  
10 port?

11 MS. OGRAM: The Bioterrorism Act  
12 specifically requires that that food be held at the  
13 port of entry unless FDA directs its movement to a  
14 secure facility.

15 MR. BARNETT: Who pays for that, who pays  
16 for all that storage?

17 MS. OGRAM: The proposed regulations will  
18 require that the consignee, owner, importer, or  
19 purchaser of the food will be responsible for the  
20 movement of the food to a secure facility, as well  
21 as the storage fees associated with that movement.

22 MR. BARNETT: Go ahead, I am sorry.

1 MS. OGRAM: And that movement will have to  
2 occur under bond.

3 MR. BARNETT: Bob, we have, the FDA has  
4 arrangements and agreements and understandings with  
5 NAFTA, the World Trade Organization. Very briefly,  
6 does this registration have any effect on that?

7 MR. LAKE: No, Mark, it has no effect on  
8 our obligations, but we have considered our  
9 obligations under the World Trade Organization and  
10 North American Free Trade Agreements. We are fully  
11 aware of those requirements, we are complying with  
12 them.

13 Now, the other thing I would note is that  
14 we are taking steps to make our computer interface  
15 with both this and the other proposal  
16 user-friendly, so that it is easy for all parties,  
17 foreign and domestic, to comply, and in addition to  
18 that, we are doing what we can to make compliance  
19 with these new requirements as easy as possible, as  
20 least burdensome as possible, consistent, of  
21 course, with the requirements to protect the  
22 American people.

1           So, we do believe that we are in full  
2 compliance with our trade obligations.

3           MR. BARNETT: Okay. Let me give you the  
4 logistic situation now. We have about 15 more  
5 minutes for this panel. I have one more question  
6 to ask you, and I have, I am happy to say, a pile  
7 of faxes from our viewers, so let me ask you my  
8 final question. I hope you keep your answer fairly  
9 brief, and then we will dig into these.

10           My last question is what is coming, what  
11 are the next steps in this registration regulation?

12           MR. LAKE: Okay, Mark. The most important  
13 thing is that the people reviewing and others who  
14 are interested in these proposals to submit their  
15 comments to the Food and Drug Administration during  
16 the comment period, which will be for 60 days.

17           We will consider all those comments, in  
18 fact, we are required to consider every issue  
19 raised by the comments before we issue the final  
20 regulation. We will, of course, be--or when you  
21 submit your comments, it is, of course, important  
22 that you identify the docket number associated with

1 the proposal.

2 In this case, the docket number is  
3 02N-0276. Using that docket number assures that  
4 your comment will come into this document and be  
5 reviewed by the Food and Drug Administration.

6 Also, on the screen now I believe is a  
7 reference to the FDA web site where these documents  
8 can be reviewed and other information obtained.

9 MR. BARNETT: Okay. Now, let me start in  
10 on some of these faxes, and I am simply going to  
11 ask you to raise your hand if you want to respond.

12 This one says do importers who do not  
13 repack or store have to register?

14 MS. FRASER: The rule applies to  
15 facilities, not to persons, so if it is a facility  
16 that is manufacturing, processing, packing, or  
17 holding food in the United States or abroad except  
18 for those exceptions and exemptions, they would  
19 have to register, so it is not an importer, it  
20 would be the facility.

21 MR. BARNETT: Okay. The next one says I  
22 am confused about FDA's role in regulating live

1 animals, such as elk or live hogs. Aren't these  
2 animals regulated by USDA? How do the registration  
3 requirements pertain to live animals?

4 MR. LAKE: I will respond to that. The  
5 Department of Agriculture Food Safety and  
6 Inspection Service is responsible for regulating  
7 the slaughter and subsequent handling of meat and  
8 poultry products, but while the animals are still  
9 alive, they are under the jurisdiction of the Food  
10 and Drug Administration and always have been.

11 In addition to that, there are many game  
12 meats that fall outside of the USDA system that  
13 have always been regulated by FDA.

14 MR. BARNETT: The phone and fax numbers  
15 are up on the screen. You still have some time.  
16 We want more of these. We have got a big pile and  
17 we want even more, so get your questions in.

18 Here is another one. Would a foreign food  
19 packer or processor be required to register if it  
20 sells the food to a distributor within the foreign  
21 country with the intent that the food will be  
22 consumed in the foreign country and the distributor

1 later exports the food to the U.S.?

2 MS. FRASER: Well, the duty to register is  
3 for food that is consumed in the United States.  
4 Part of the requirements is that food from  
5 unregistered facilities may not be imported into  
6 the United States, so if the distributor is  
7 choosing to import food into the U.S., and the  
8 facility doesn't know about it, and the facility  
9 hasn't registered, the food will not be able to  
10 come in, and that is a requirement in the  
11 Bioterrorism Act.

12 So, that question, it would behoove the  
13 distributor to talk to the facility to make sure  
14 the facility is registered.

15 MR. BARNETT: Okay. Another one, and we  
16 have quite a few, so this is good, keep your answer  
17 fairly brief and we may make it. It is like a  
18 conductor on a train, we are going to get to  
19 Chicago maybe.

20 If all processing plants in a foreign  
21 country are registered with the competent--by the  
22 way, this one is from Australia--if all processing

1 plants in a foreign country are registered with the  
2 competent authority, that is, the government agency  
3 of the foreign country, and the foreign  
4 government--it's hard to read this--provides this  
5 list to the FDA, does each individual plant in that  
6 country have to register with the FDA?

7 MR. LAKE: The answer to that is yes. The  
8 Act specifically requires that these facilities  
9 register with the Food and Drug Administration if  
10 they are going to be sending food to the United  
11 States.

12 MR. BARNETT: Okay. Next. Are  
13 manufacturers, processors, packers, or holders of  
14 shell eggs required to register?

15 MR. LAKE: Yes, they are. Processed egg  
16 products come under the USDA, but shell eggs are  
17 still FDA.

18 MR. BARNETT: Okay. Please clarify the  
19 definition of food. For example, does it include  
20 food ingredients and direct food additives, as well  
21 as food contact substances?

22 MS. FRASER: Yes, it does. The definition

1 of food is very broad. It includes finished food  
2 products, as well as food ingredients and  
3 substances that migrate into food because they are  
4 part of the containers in which the food is held.

5 MR. BARNETT: When is an ingredient  
6 considered a food and when is an ingredient  
7 considered a non-food? Is a raw coffee bean a food  
8 or does it become a food only after roasting?

9 MR. LAKE: I will take that one. In the  
10 case of something like coffee, a coffee bean,  
11 although it is going to be further processed, it is  
12 ordinarily used only for food, and so we do now  
13 regard it, and would continue to regard it, as  
14 being a food at the time it is imported into the  
15 United States.

16 MR. BARNETT: Okay. If juice concentrate  
17 is extracted or concentrated in a foreign facility,  
18 is held, and then transported and shipped to the  
19 U.S., which facility is required to register, if  
20 any? Shall I read that again?

21 MS. FRASER: Yes.

22 MR. BARNETT: If juice or concentrate is

1 extracted and concentrated in a foreign facility,  
2 is held, and then transported via ship to the U.S.,  
3 which facility is required to register?

4 MS. FRASER: The facility it is held--I am  
5 assuming from that question it is held in a  
6 different facility--and both would be required to  
7 register because it is a foreign facility that  
8 processes or packs, that manufactures, processes,  
9 packs, or holds food is required to register unless  
10 there is further processing or packaging.

11 So, storing it does not exempt the foreign  
12 facility that manufactured and processed it in the  
13 first place, nor does it relieve the subsequent  
14 facility that is holding it from registering. So,  
15 in that case, both would.

16 MR. BARNETT: Okay. Are facilities or  
17 firms that manufacture food contact or packaging  
18 materials subject to registration?

19 MR. LAKE: If at the time they are  
20 manufacturing the material, they know that it is  
21 going to be used for food use, then, that facility  
22 is required to register with FDA.

1 MR. BARNETT: Okay. This one says do  
2 trade names or product brand names or facility  
3 operating names--well, there is no verb there, so I  
4 don't know, I guess it means which name should they  
5 use?

6 MS. FRASER: The facility, in many cases,  
7 both, the facility has to register its name and  
8 then another piece of required information is the  
9 trade name.

10 MR. BARNETT: This one, I think you  
11 answered, and if you did, maybe we shouldn't do it  
12 again. It says how and when is updating  
13 information provided or required? I think we did  
14 that. You talked about that, so I think we will  
15 let that one go.

16 If domestic or foreign firms are already  
17 registered with FDA for other purposes, for  
18 example, drug registrations, is it necessary to  
19 re-register under Bioterrorism? I think you have  
20 pretty covered that one, as well.

21 Here is one from a consumer. It says as a  
22 mother of three small children, I have serious

1 concerns, not just about the safety of our food  
2 supply, but also about how quickly a recall can  
3 take place should the worst case scenario actually  
4 happen. Will someone please comment on that.

5 MR. LAKE: The new legislation does not  
6 have anything in it about recall, but it does have  
7 a number of things that will give FDA more  
8 information sooner, and armed with this earlier  
9 information, we believe that it will assist FDA in  
10 identifying problems and getting bad food off the  
11 market either through recall or other means.

12 MR. BARNETT: Do warehouse clubs, like  
13 Sam's Club, Costco, et cetera, have to be  
14 registered individually, since they oftentimes sell  
15 to other retailers?

16 MS. FRASER: Yes, this is a facility by  
17 facility registration, so each Sam's Club or Costco  
18 in that example would have to register just like  
19 any other facility engaged.

20 MR. BARNETT: Do farm markets or community  
21 farm markets need to register?

22 MS. FRASER: Many of those would fall

1 under the retail exemption if they are selling food  
2 directly to consumers, so the question would be  
3 who are their customers.

4 MR. BARNETT: Suppose I am an exempt  
5 company and I also donate food off site, for  
6 example, to a food bank and distributed locally,  
7 does this now require me to register?

8 MS. FRASER: That's a good question, and  
9 we would like to get comment on that one, because I  
10 don't think we have addressed that one specifically  
11 in the regulation.

12 MR. BARNETT: Do supermarkets that have  
13 central commissaries dedicated to their  
14 Own--capitalized--Own stores need to register?

15 MS. FRASER: If they are considered part  
16 of the retail exemption, if they are selling it to  
17 consumers, in this case, the consumers would be  
18 their employees, but they still would be consumers.

19 MR. BARNETT: Pet and animal shelters are  
20 exempt from the rule. Does that exemption apply to  
21 veterinary clinics that sell food to pet owners and  
22 use food during treatment or boarding?

1 MS. FRASER: Yes, they are exempt.

2 MR. BARNETT: A one-word answer with the  
3 time we have, that is really good.

4 As a food processor, what responsibility  
5 does my establishment have to confirm or verify  
6 that our vendors or suppliers are registered  
7 through FDA?

8 MR. LAKE: I will take that one. The only  
9 responsibility that any facility has is for its own  
10 actions, so it has to register itself, it does not  
11 have to take responsibility for the registration by  
12 anybody else.

13 MR. BARNETT: Do not, I wonder--oh, here  
14 is one.

15 Do companies already--you answered that  
16 one about, okay, about preregistration. Any plans  
17 to extend these requirements to cosmetic  
18 manufacturing establishments?

19 MR. LAKE: No. The law only covers foods,  
20 not cosmetics.

21 MR. BARNETT: What do you mean by a  
22 nonprofit food facility?

1 MS. FRASER: We have a proposed definition  
2 in the rule for that, but it is a facility that is  
3 exempt under current Internal Revenue Service  
4 regulations.

5 MR. BARNETT: Does the registration number  
6 have to be listed on the packaging?

7 MS. FRASER: No, it does not.

8 MR. BARNETT: Who does a foreign company  
9 list as its agent if they deliver directly to a  
10 retail facility?

11 MS. FRASER: The foreign facility has the  
12 obligation of deciding who it wants as its U.S.  
13 agent. The only requirement we are proposing is  
14 that that person reside or maintain a place of  
15 business in the United States.

16 MR. BARNETT: Will FDA send reminders of  
17 registration updates?

18 MS. FRASER: We are considering ways of  
19 reminding facilities that updates are due and  
20 looking for ways, so we are looking also for  
21 comments on how we can get facilities to provide  
22 timely updates.

1 MR. BARNETT: The pile is exhausted, and  
2 we have just a very few minutes. I don't think we  
3 are getting any more faxes right now, so what I am  
4 going to do is declare a break now, so we can  
5 change panels, and so on, so we are going to take a  
6 10-minute break.

7 When we come back, we are going to proceed  
8 to the second panel on Prior Notice. Now, during  
9 the break, we are going to be showing you some  
10 important information on your screen. You will see  
11 the electronic and mail addresses you should use to  
12 submit your comments to the Dockets Management  
13 Branch, and you will see the Internet address for  
14 FDA's Bioterrorism web page.

15 On that web page, you will find a link to  
16 all of the comments received by FDA on these  
17 proposed rules. You will find updated information  
18 on future broadcasts, and a wide variety of topics  
19 on FDA's activities involving bioterrorism.

20 So, we will be back here in 10 minutes.

21 [Break.]

22

**Panel II**

1 MR. BARNETT: The pile is exhausted, and  
2 we have just a very few minutes. I don't think we  
3 are getting any more faxes right now, so what I am  
4 going to do is declare a break now, so we can  
5 change panels, and so on, so we are going to take a  
6 10-minute break.

7 When we come back, we are going to proceed  
8 to the second panel on Prior Notice. Now, during  
9 the break, we are going to be showing you some  
10 important information on your screen. You will see  
11 the electronic and mail addresses you should use to  
12 submit your comments to the Dockets Management  
13 Branch, and you will see the Internet address for  
14 FDA's Bioterrorism web page.

15 On that web page, you will find a link to  
16 all of the comments received by FDA on these  
17 proposed rules. You will find updated information  
18 on future broadcasts, and a wide variety of topics  
19 on FDA's activities involving bioterrorism.

20 So, we will be back here in 10 minutes.

21 [Break.]

22 **Panel II**

1                   **Prior Notice of Imported Food Shipments**

2                   MR. BARNETT: Okay. We are back live and  
3 ready for our second panel, to discuss the proposed  
4 regulation on Prior Notice of Imported Food  
5 Shipments. Remember, this regulation focuses on  
6 all FDA-regulated food and animal feed. With this  
7 regulation, the obligation to comply rests with the  
8 importer, purchaser, or their agent, and so this  
9 panel is going to be particularly interesting to  
10 them.

11                   Let me introduce our panelists.

12                   Bob Lake, who was here for our first  
13 panel, is director of the Office of Regulations and  
14 Policy in FDA's Center for Food Safety and Applied  
15 Nutrition.

16                   Leslye Fraser, who was also here during  
17 our first panel, is associate director for  
18 Regulations in that office.

19                   Ben England is regulatory counsel to the  
20 Associate Commissioner for Regulatory Affairs in  
21 FDA's Office of Regulatory Affairs.

22                   George Brush is project officer in the

1 Office of Information Technology in FDA's Office of  
2 Regulatory Affairs.

3 Bob, let me start with you again and ask  
4 you a similar question to the one that I asked the  
5 first time.

6 What is prior notice and why has FDA  
7 proposed doing it?

8 MR. LAKE: Again, as the Commissioner  
9 pointed out at the beginning of this telecast, the  
10 Bioterrorism Act of 2002 requires that we go  
11 through rulemaking on the prior notice  
12 requirements.

13 More importantly, though, I think is that  
14 the real value to FDA and to the American people of  
15 this proposed requirement is that it will provide  
16 FDA advance notice of what is coming to the U.S.,  
17 where it is coming in and where it is coming from,  
18 and this will enable, better enable FDA to make  
19 judgments about what it is we look at, what we need  
20 to look at, so that we can meet it when it arrives,  
21 and we believe this will better enable us to  
22 protect the health of the American people.

1 MR. BARNETT: The first panel talked about  
2 registration, this panel is talking about prior  
3 notice. Very briefly, distinguish the two.

4 MR. LAKE: Yes. The previous discussion  
5 we had around registration focused on facilities,  
6 whether those facilities were in the United States  
7 or abroad. This proposal is not about facilities,  
8 but is rather about articles of food, which we will  
9 explain further as we go along.

10 Again, it is articles of food that are  
11 being imported into the United States.

12 MR. BARNETT: Leslye, the Bioterrorism Act  
13 actually doesn't specify who should submit the  
14 prior notice. So, under the regulations, who have  
15 you authorized to submit prior notice of shipments?

16 MS. FRASER: Yes, Mark, the Act did not  
17 specify and to avoid confusion, what FDA is  
18 proposing is that it is the purchaser, the importer  
19 who resides or maintains a place of business in the  
20 United States, is authorized to provide prior  
21 notice, or they can have an agent acting on their  
22 behalf also who resides or maintains a place of

1 business in the United States.

2 Then, for articles of food that are  
3 imported, transported in the United States to  
4 another port and then exported, they also have to  
5 have prior notice, but in that case, we are also  
6 authorizing the arriving carrier or the  
7 transporting carrier to provide the prior notice.

8 MR. BARNETT: Talk about the foods that  
9 are subject to this regulation on prior notice.

10 MS. FRASER: This is the same list of  
11 foods that were subject to registration and for  
12 those who will be viewing this tape live and maybe  
13 separately from registration, I will go through it  
14 again.

15 It is food that is in our current Federal  
16 Food, Drug, and Cosmetic Act. That is the  
17 definition that we are using, and that is articles  
18 of food used for food or drink for man or animals,  
19 chewing gum, and components of these articles.

20 Again, we have also included a list of  
21 examples of the breadth of food that FDA regulates  
22 just so that people understand what types of food

1 are subject to the prior notice requirements.

2           Again, going through that slowly, it would  
3 be fruits and vegetables, fish and seafood, dairy  
4 products, eggs, raw agricultural commodities for  
5 use as food or components of food, canned foods,  
6 animal feed including pet food, food or food  
7 ingredients, food additives including substances  
8 that migrate into food from packaging and other  
9 articles that contact food.

10           Food also includes dietary supplements and  
11 dietary ingredients. It includes infant formula  
12 and other beverages including alcoholic beverages  
13 and bottled water, live food animals such as hogs  
14 or elk, and bakery goods, snack foods, and candy.

15           MR. BARNETT: Did I hear correctly that  
16 this list then includes a few more foods than the  
17 registration list?

18           MS. FRASER: No, it's the same list--

19           MR. BARNETT: It's the same list, okay.

20           MS. FRASER: --as the registration list.

21           MR. BARNETT: Okay. You said, and the  
22 first panel said, that farms are not required to

1 register with the FDA. Does that mean that a  
2 product that goes directly from a foreign farm to  
3 the U.S. is exempt from prior notice?

4 MS. FRASER: No, that is not correct.  
5 Again, the registration rule covered facilities,  
6 and there were certain exemptions provided in that  
7 rule and in the statute. By comparison, prior  
8 notice applies to all foods that are imported or  
9 offered for import into the United States  
10 regardless of the destination or regardless of the  
11 source of the food.

12 So, here, it is food that is subject to  
13 FDA's jurisdiction that is subject to the prior  
14 notice requirements.

15 MR. BARNETT: What if, let's say, tomatoes  
16 are transported from Mexico, through the U.S. to  
17 Canada, they are not used in the U.S., there is no  
18 U.S. importer, there is no U.S. purchaser, is prior  
19 notice required on that?

20 MS. FRASER: Yes, prior notice is required  
21 even though the food is not being consumed in the  
22 United States or intended for consumption here, it

1 is still offered for import or imported into the  
2 United States before being exported, and under the  
3 statute, prior notice would be required. Here, the  
4 notice could be provided by the arriving carrier or  
5 the carrier that is transporting it.

6           There is one point I wanted to make about  
7 the registration and the prior notice requirements  
8 and just about our regulations in general. It is  
9 really important to read them in toto and see that  
10 you may be subject to one regulation and exempt in  
11 another, but just because you are exempt in one  
12 does not automatically mean that you would be  
13 exempt in another. Each regulation stands on its  
14 own, and so people do have to look at it carefully  
15 to see whether they are subject or not.

16           MR. BARNETT: Good point. What foods, if  
17 any, are not subject to prior notice?

18           MS. FRASER: There is one category of  
19 foods again, that is foods regulated by the U.S.  
20 Department of Agriculture, and that is meat,  
21 poultry, and egg products. Those foods products  
22 are exempt from the prior notice requirements.

1           Then, there is a second exemption that FDA  
2 is proposing and seeking comment on, and this is  
3 food that is brought into the country in a  
4 traveler's personal baggage for their personal  
5 consumption, and when we say "personal  
6 consumption," we are talking about food for their  
7 use, their friends, and their family, but if a  
8 traveler is bringing in food with the intent of  
9 selling it to another or giving it broadly into  
10 distribution, then, prior notice would be required.

11           MR. BARNETT: So, Leslye, so far we have  
12 talked about the definition of prior notice, we  
13 have talked about which foods. Let's talk now  
14 about what information has to be included in prior  
15 notice.

16           MS. FRASER: There is a list that will  
17 appear on your screen of the information that we  
18 are proposing to be required, and again, much of  
19 this information does come from the Bioterrorism  
20 Act. We are asking for who is submitting the prior  
21 notice. We have authorized a number of people to  
22 provide it.

1           We are asking for who is the submitter, is  
2   it a firm or an individual. What is the Customs  
3   entry type, is it a consumption entry or an export  
4   entry, for example, what is the Customs code. They  
5   also have to provide the Customs entry number and  
6   line numbers, and this is so that FDA can  
7   communicate with Customs, and when the food  
8   arrives, be able to tell them that we did receive  
9   adequate prior notice.

10           We need information on the product  
11   identity, and there is a detailed list of what that  
12   means. It's the FDA product code, and there is  
13   seven digits that have to be completed for that.  
14   The common usual or market name of the food being  
15   imported. The trade or brand name of that food.  
16   The quantity including lot numbers or from the  
17   largest size down to the smallest, and any other  
18   identifiers also have to be provided.

19           The notice also must include information  
20   on the manufacturer and shipper. We need their  
21   names, addresses including the country that they  
22   are in, and if the food is associated with the

1 facility that has to register, then, the  
2 manufacturer and shipper also have to provide the  
3 registration number.

4 Continuing, we need to know the grower, if  
5 that is known. We need to know the originating  
6 country of the food, and Ben will talk about that  
7 in a little bit, and we need to know the country  
8 from which the article was shipped. We also need  
9 detailed information of all the importers, the  
10 owners, and the consignees, and when I say  
11 "detailed," I mean the name, the address, any  
12 registration numbers that apply to them.

13 We need anticipated arrival information  
14 including the location of the port of entry and the  
15 time of arrival. We need to know the carrier  
16 including the standard carrier abbreviation code,  
17 and then lastly, we need to know the submission  
18 type, is this the initial prior notice that is  
19 being provided, is it an amendment to the product  
20 identity, and we will talk about that in a little  
21 bit, or is it an update to the arrival information,  
22 or is it a cancellation of a previously submitted

1 prior notice.

2 MR. BARNETT: Let's talk a little bit  
3 about timing. There is a window of time in which  
4 this can be submitted, the prior notice, not too  
5 early, not too late.

6 Tell us about what that window looks like.

7 MS. FRASER: That is correct. Under the  
8 proposed rule, we are saying that prior notice  
9 cannot be submitted more than five days before the  
10 food arrives at the port of entry, and that is the  
11 limitation that is in the Bioterrorism Act.

12 And then on the other end, FDA is  
13 proposing that the prior notice must be submitted  
14 no later than noon of the calendar day before the  
15 food arrives at the port of arrival, so there is  
16 that window that the prior notice must be submitted  
17 within.

18 MR. BARNETT: Before we go on, let me  
19 pause here and mention to our audience, we would  
20 like to get your questions phoned or faxed or  
21 e-mailed in as soon as possible, so if possible,  
22 don't wait until the end. Start sending them in

1 now. We will accumulate them and then when I am  
2 done with my questions here, we will start  
3 answering them. So, get the questions in as soon  
4 as your can and we will consider them.

5 George Brush, talk about how the prior  
6 notice is submitted. We have been talking about  
7 other things like what it has to have in it, and  
8 when, but how do you do it?

9 MR. BRUSH: Prior notice needs to be  
10 submitted through FDA's web-based prior notice  
11 system. The system will be available 24 hours a  
12 day, 7 days a week.

13 MR. BARNETT: It has to be submitted  
14 electronically or can you use paper?

15 MR. BRUSH: It has to be submitted  
16 electronically. Unlike registration, we require an  
17 electronic submission for prior notice.

18 MR. BARNETT: Now, if I am a submitter and  
19 I do this electronically, how do I know that you  
20 received it?

21 MR. BRUSH: Well, the system will return  
22 an electronic confirmation if the record is

1 completed to our satisfaction. The record will  
2 contain the date, the time, as well as a reference  
3 number for your submission.

4 MR. BARNETT: Now, you said if it's  
5 completed to our satisfaction, which leads to the  
6 next question, and that is, how am I going to know  
7 if it is not to your satisfaction and if you don't  
8 accept it?

9 MR. BRUSH: Well, only accepted  
10 submissions will receive this confirmation  
11 notification. If you have not received this  
12 confirmation notification, then, the FDA has not  
13 accepted your submission.

14 It is important to note that the system  
15 will be designed such that it will prompt the user  
16 throughout the process to ensure that the mandatory  
17 fields and the submission in general are completed  
18 accurately.

19 MR. BARNETT: Will the system tell me that  
20 the prior notice that I send in is adequate, and  
21 then therefore it is okay for me to go ahead and  
22 send the shipment?

1 MR. BRUSH: No, the system won't return  
2 information regarding the evaluation of the  
3 submission. The system will only return  
4 information regarding a confirmation that the  
5 record has been received.

6 MR. BARNETT: Simply an acknowledgment  
7 that you got it.

8 MR. BRUSH: That's correct.

9 MR. BARNETT: And that is as far as it  
10 goes.

11 MR. BRUSH: That's correct.

12 MR. BARNETT: Ben England, let me carry on  
13 from that then. One of the purposes of this is to  
14 identify those shipments that may need further  
15 action by the FDA, an examination or whatever.

16 When am I going to learn if I am a  
17 shipper, whether the FDA is going to be examining  
18 my shipment, will I get it as part of this process?

19 MR. ENGLAND: No, you wouldn't learn that  
20 until the article actually arrives at the port of  
21 entry, the first place that the article arrives at  
22 the U.S.

1           MR. BARNETT: Let's suppose that I have a  
2 mixed shipment, Ben. It contains canned tuna from  
3 three different manufacturers. The question is, do  
4 I have to enter the same identical information  
5 three times or is that one prior notice?

6           MR. ENGLAND: Well, first, this is a good  
7 time to distinguish between a shipment of food and  
8 an article of food. An article of food, the  
9 proposed rule for prior notice relates to articles  
10 of food that are imported or offered for import in  
11 the United States, and it is very possible that a  
12 shipment, like a 40-foot container, for instance,  
13 might contain numerous different articles of food  
14 for prior notice's purposes.

15           That is the example you have here. This  
16 is the three different manufacturers for canned  
17 tuna, and there is a slide that is on the screen  
18 that I think will help to explain this.

19           If you look at the slide, you will see  
20 that on the righthand side, you have got three  
21 different manufacturers identified. Even though it  
22 is all canned tuna, because of the three different

1 manufacturers, each of those constitute a separate  
2 article of food for purpose of prior notice.

3           So, a prior notice would have to be  
4 submitted for each of those manufacture tuna  
5 connections, and it is also true when it comes to  
6 the different size cans, you will see that two of  
7 the lines are the same manufacturer, but there are  
8 12-ounce cans and 6-ounce cans, and those also  
9 would constitute separate articles for the purposes  
10 of prior notice.

11           MR. BARNETT: Let me give you another  
12 example. Suppose I import corn and wheat and it is  
13 shipped on the same truck. Now, do I submit one or  
14 two prior notices for that truckload?

15           MR. ENGLAND: Here, you clearly have two  
16 articles, you have corn and you have wheat, and  
17 consequently, you would have two prior notices, and  
18 that is not unlike what we have now even with  
19 Customs. They would be considered separate  
20 articles, separate products for purposes of  
21 Customs, as well, for their declaration. You would  
22 have to have two separate lines for that.

1 MR. BARNETT: George, I am assuming,  
2 despite the fact that multiple prior notices have  
3 to be sent, that the FDA is trying to make this as  
4 simple for submitters as possible.

5 MR. BRUSH: We are doing just that. The  
6 FDA is designing the system to minimize the amount  
7 of data that is required for each entry. Data that  
8 is common to a submission within a food shipment  
9 will only be required one time. However, data that  
10 pertains to the article or the manufacturer is  
11 required for each submission.

12 MR. BARNETT: Ben, it is interesting to  
13 note that prior notice really requires the same  
14 information that companies are currently giving to  
15 Customs, and so I think a question in people's  
16 minds is going to be why am I doing this again for  
17 the FDA.

18 MR. ENGLAND: Well, to begin with, there  
19 are a number of things that are different between  
20 what FDA would do with the information versus with  
21 Customs. As mandated in the statute, prior notice  
22 must be submitted to FDA prior to arrival.

1 Currently, we receive data related to these kinds  
2 of entries, but very often it is not transmitted  
3 until well after the article has been imported and  
4 is, in fact, could be thousands of miles down the  
5 road in another state someplace.

6 So, this allows us to get the information  
7 in advance. The purpose would be to evaluate the  
8 data in order to determine which articles or which  
9 importations we should examine before it comes into  
10 the country for the purposes of protecting the  
11 public.

12 Now, as far as Customs and FDA and the  
13 different systems, Customs is developing their  
14 automated commercial environment, ACE, and FDA is  
15 working with Customs to do that, and we plan to  
16 continue to do so.

17 Unfortunately, ACE is not going to be at a  
18 stage where they will be able to receive prior  
19 notice by December of this year, and their current  
20 system, the automated commercial system, ACS, we  
21 are not going to be able to get changes made in  
22 that quickly enough to do it either.

1           Consequently, we will have to set up our  
2 own system. Before the prior notice requirement,  
3 the circumstances that we were dealing with before,  
4 it is not unlikely for articles, like the tomato  
5 example for instance, that you asked Leslye, where  
6 an article could come from Mexico, could cross the  
7 U.S. border, go through the United States, and into  
8 Canada.

9           Under our current system, we never even  
10 learn about that shipment at all, despite the fact  
11 that it is an importation, so under prior notice,  
12 we will learn that information.

13           MR. BARNETT: It seems as though, too,  
14 that there is a difference between the purpose of  
15 what the FDA needs from this information and what  
16 Customs need. There, it is trade and here, it is  
17 public health.

18           MR. ENGLAND: Public health and safety  
19 related to potential bioterrorism issues or  
20 foodborne.

21           MR. BARNETT: Right. So, the key things  
22 are speed and then catching things early.

1 MR. ENGLAND: Before they actually get  
2 into the United States.

3 MR. BARNETT: Right, right.

4 George, I am assuming that we are going to  
5 try to design this, so people can use it all the  
6 time, as quickly as possible, conveniently as  
7 possible.

8 MR. BRUSH: Well, you know, we are trying  
9 to make it as simple as possible. One of the  
10 things that we are doing is we are designing a  
11 system, such that it is available at all times to  
12 receive prior notice submissions. It will be  
13 available, as I mentioned before, 24 hours a day,  
14 7 days a week.

15 MR. BARNETT: We talked, Ben, about the  
16 importance of speed from the FDA's standpoint. Why  
17 is speed so important?

18 MR. ENGLAND: As Bob mentioned actually  
19 earlier, we believe that the prior notice proposed  
20 rule will significantly improve FDA's ability to  
21 deter, or to prepare for, or respond to a  
22 bioterrorism event or concern, as well as other

1 public health emergencies that might be related to  
2 imported foods, and in order to be able to do that,  
3 we are going to need the information in advance.  
4 Otherwise, the article would already be in the U.S.  
5 before we become aware of it.

6           Currently, there is no system for FDA to  
7 receive in advance this kind of information, so we  
8 are kind of in the position where we have to build  
9 one independently, which is what George was talking  
10 about, the web-based system.

11           It is also important for us to be able to  
12 assess this data in advance, not just to get it  
13 when the goods get here, but to be able to get it--

14           MR. BARNETT: Which requires a little more  
15 time.

16           MR. ENGLAND: --assess it, evaluate it,  
17 and then to be able to make a decision as to where  
18 we should put resources in order to most  
19 efficiently deal with those articles that we need  
20 to look at, and then also remove delays from  
21 articles that we feel comfortable and confident  
22 that we can move them on.

1           MR. BARNETT: We were talking just now  
2 about the difference in outlook or I suppose in  
3 purpose between what we need and what Customs  
4 needs.

5           Why don't you talk a little bit more  
6 specifically about the information that we are  
7 going to require in this regulation versus what  
8 Customs requires.

9           MR. ENGLAND: There is two issues that  
10 when people read the proposed rule, they will see  
11 that there are some differences, and the first one  
12 is our definition of originating country.

13           The proposed rule for prior notice defines  
14 originating country as the country from which the  
15 food originates, and it seems like a minor  
16 distinction from Customs' purposes, from Customs'  
17 standpoint, but I have a slide that will help to  
18 explain some of this.

19           If you look at the slide, you will see  
20 that if you assume, for instance, that in the  
21 United States, raw carrots are harvested in the  
22 U.S., and then they are exported, and then in this

1 other country, country X, where they are exported  
2 to, the product is washed, peeled, and packaged.

3 Then, it is reimported back into the  
4 United States. That article, as it comes back in,  
5 would have to have a prior notice related to it,  
6 because the originating country, for FDA's  
7 purposes, would be the washing, the peeling, and  
8 the packaging because that is the activity that has  
9 us concerned, that may have us concerned about it.

10 However, the Customs' country of origin  
11 would be the United States of America. So, that is  
12 one of the distinctions. This is not new, though,  
13 this distinction has actually been around for a  
14 period of time, and it has mostly to do with the  
15 purposes for which Customs has their country of  
16 origin and FDA has its originating country.

17 Another distinction between Customs and  
18 FDA has to do with the way FDA is defining, in the  
19 proposed rule, a port of entry, and there is a  
20 slide here also that explains that. The proposed  
21 rule defines the port of entry as the water, air,  
22 or land port at which the article of food is

1 imported or offered for import into the United  
2 States.

3 A rule of thumb is it is the port where  
4 the food first arrives in the U.S. It may not be,  
5 in fact, the port where the Customs' entry is  
6 filed, and the slide is an example of this.

7 You will see that if a shipment of food  
8 were to come into a seaport in California, and then  
9 it would be delivered to Oklahoma where the  
10 Customs' entry is filed, for FDA's purposes, the  
11 port of entry is the port of arrival,  
12 consequently, it is the California port, whereas,  
13 for Customs' purposes, they may, in fact, they  
14 would count then Oklahoma as the port of entry, so  
15 those are two of the big distinctions.

16 It is worth noting that whenever an  
17 article of food crosses the border now, there is  
18 always a Customs' entry filed of some kind. It may  
19 not be a consumption entry, it could be a warehouse  
20 entry or other type of entry, but there is always  
21 some kind of an entry that is filed.

22 We just believe that this definition is

1 going to assist us in better protecting the public  
2 from potential threats of imported foods, so we  
3 felt it was important to be able to access the  
4 product before it actually is imported into the  
5 U.S.

6 MR. BARNETT: Thank you.

7 Leslye, shipment plans change, shipment is  
8 a dynamic concept, so, you know, you can plan one  
9 thing and something else happens.

10 How can the prior notice be changed after  
11 I find out that it isn't going to be the way it is  
12 going to be?

13 MS. FRASER: There are two ways of  
14 changing it, and we will talk about the first way,  
15 which is amendments, and amendments relate to the  
16 product identity. Under the proposed rule, we were  
17 concerned about shipments that the person ordering  
18 the food may not know with exact specificity what  
19 they are going to get the next day, and this really  
20 comes with just-in-time shipments or fish fresh  
21 catch of the day. I may know that I am ordering  
22 fish, but I don't know whether I am going to get

1 cod or seabass or halibut or whatever.

2           So, we still would require the prior  
3 notice by noon of the calendar day before the food  
4 is to arrive, and all of the information pretty  
5 much should be known at that point except the exact  
6 breakout of what kind of fish. I know I am  
7 ordering fish, I am just not sure what kind I am  
8 getting.

9           In that case, they can provide an  
10 amendment up to two hours before the food arrives  
11 that updates the amount of fish by species that we  
12 are getting in. So, that is one of the changes  
13 that we are allowing to take into account what  
14 isn't known at the day before, but still allows FDA  
15 to make decisions on whether we need to be present  
16 when the food arrives to make inspections or other  
17 examinations.

18           MR. BARNETT: Now, you talked about the  
19 difference between three kinds of fish, but how far  
20 can you take that? We talked about carrots before.  
21 Suppose it isn't carrots, and now it's squash. Can  
22 you amend that?

1 MS. FRASER: No, you cannot use the  
2 amendment process to change the identity of what  
3 you are getting. It is really to provide more  
4 detail and more specificity on the product you have  
5 already ordered.

6 If you are ordering carrots and then you  
7 want squash, then, you would need to have a  
8 separate prior notice for the squash.

9 MR. BARNETT: Ben, let's carry the example  
10 a little further. Pretend that on Tuesday morning  
11 I order 1,000 pounds of fresh headed and gutted  
12 fish from a foreign supplier, and it is supposed to  
13 arrive on Wednesday morning, but I don't know  
14 exactly what species they are going to send me, I  
15 don't know what they can catch, and I don't know  
16 whether I am really going to get 1,000 pounds or  
17 not.

18 Now, what do I do?

19 MR. ENGLAND: This is a good question, and  
20 the reason is we have already received this kind of  
21 an inquiry particularly from importers who  
22 routinely import fresh produce, for instance,

1 across the land borders, or a product that comes in  
2 via air shipment from a close neighboring country,  
3 and so their concern is that I may not know how  
4 much until I actually load the truck or until the  
5 wheels are up on the airplane.

6           What you would do in those circumstances  
7 is that because you are expecting it to arrive on  
8 Wednesday and you know it on Tuesday, of course, is  
9 that you need to file, submit your prior notice by  
10 noon on Tuesday, which is the calendar day prior to  
11 the anticipated day of arrival.

12           When you do your prior notice, you also  
13 have to indicate that you have the intent to amend  
14 it because you already know that you are not quite  
15 sure what the quantity is going to be or what the  
16 arrival information is, but there is a lot of  
17 information you know already at the time you order  
18 it, which is significant, and there is a slide here  
19 that points out that the information that is  
20 necessary for the prior notice, you already know  
21 and it was in your fax.

22           For instance, you know your supplier and

1 your manufacturer, you would know your shipper, and  
2 you already know the U.S. importer or you could  
3 know it, the consignee, and the buyer. In fact,  
4 you might be the importer, consignee, and buyer.

5           You would know already the first five  
6 digits of the product code, the characters of the  
7 product code. For instance, you said it was fresh,  
8 you said it was fish, you said it was head and  
9 gutted, you said it was refrigerated, which gets  
10 you five of the product code characters.

11           You would know the quantity, you asked for  
12 1,000 pounds. You would be able to identify an  
13 anticipated location or a port of arrival, port of  
14 entry where the goods are anticipated to arrive.

15           You anticipate the next day, and you  
16 probably can anticipate when the next day, so you  
17 probably have the time of arrival already that you  
18 put into the prior notice. You would be able to  
19 put the carrier into the prior notice, and you  
20 should also have the ability to obtain, probably  
21 from your Customs broker is where you would have to  
22 get it, but the entry and line numbers and then the

1 port of entry that might be associated with it, if  
2 it turns out to not be the same port where the  
3 goods cross the border or where they are first  
4 imported.

5 MR. BARNETT: Then, I submit the amendment  
6 to fill in the empty blanks, so the amendment has  
7 to be changed.

8 MR. ENGLAND: That's right, the amendment  
9 would then be for the specificity at the time.

10 MR. BARNETT: And I have got to do that  
11 within a certain time frame, right?

12 MR. ENGLAND: Yes, you have two hours in  
13 advance of the actual shipment. Within two hours  
14 of the arrival, you have to put that information  
15 in.

16 MR. BARNETT: Leslye, let me add onto that  
17 example. Same example, and now at the last minute,  
18 the supplier decides to add some shrimp, frozen  
19 shrimp to this shipment of fish. Is that okay for  
20 an amendment?

21 MS. FRASER: No, that is not okay for an  
22 amendment. Again, that would be changing the

1 product specificity, and the rationale for not  
2 allowing this, FDA really was trying to minimize  
3 what information can be changed from the standpoint  
4 of allowing us to make inspectional decisions.

5           If, in your example, we have had an alert  
6 or we know that there is potential contamination on  
7 shrimp shipments coming into the country, but we  
8 didn't have any way of expecting shrimp to come in  
9 on that shipment, we would not have had someone  
10 available to examine or inspect it, and then if two  
11 hours before, we would allow you to say, oh, now, I  
12 am adding shrimp, that would not allow us to  
13 fulfill the purpose of the Bioterrorism Act.

14           So, we are really only allowing  
15 amendments, and amendments can only be made once,  
16 up to two hours before arrival of that specificity.  
17 If you have ordered lettuce, you can tell us how  
18 much of it was romaine and how much was iceberg, or  
19 if you have ordered fish, what was the different  
20 kinds of fish, but you can't change completely what  
21 the product is.

22           MR. BARNETT: Okay. Now, we have been

1 talking about changes that have to do with the  
2 quantity or with the nature of the product. Let's  
3 talk about changes having to do with timing, about  
4 shipping.

5 I mean let's say the trucker's arrival  
6 time has changed because he was held up or he  
7 crosses the border at a different location. What  
8 about that, can you make changes on that for those  
9 sorts of things?

10 MS. FRASER: The proposed rule again would  
11 allow changes for that, and that is an instance  
12 where we call an update to the original prior  
13 notice, and you can update or you must, under the  
14 proposed rule, you would be required to update  
15 arrival information if you are coming in at a  
16 different port of entry, it may be weather  
17 conditions, it may be the road is out, whatever.

18 If you are coming in either an hour  
19 earlier than originally included on your prior  
20 notice or up to three hours or three hours or more  
21 later than what you originally told us, then, we  
22 need to have an update to that prior notice, and

1 again, that is within two hours of your new  
2 anticipated time of arrival.

3 MR. BARNETT: Okay. So, very quickly to  
4 sum up, the difference between an amendment and an  
5 update.

6 MS. FRASER: The difference would be that  
7 amendments relate to product specificity, you are  
8 updating the type, specific type of product and the  
9 quantity. An update is to arrival. What they have  
10 in common is that both have to be provided no later  
11 than two hours before arrival, and the initial  
12 submission, the amendment, and the update all would  
13 be provided electronically to FDA's prior notice  
14 system.

15 MR. BARNETT: Okay. Ben, let's shift now  
16 and talk about the consequences of not doing this.  
17 Okay. What happens if a prior notice is not  
18 submitted?

19 MR. ENGLAND: Well, the statute is clear  
20 that if a food is imported or offered for import  
21 into the United States, and it lacks prior notice,  
22 they don't tell us it is coming, then, the article

1 is subject to refusal of admission.

2 That will include at least the article  
3 will be held at the port of entry, it will be held  
4 there where they arrived, it will be held there  
5 where it arrived, and unless the FDA directs that  
6 the article be transported into secure storage.

7 If that happens, then, the importer or the  
8 owner or the consignee or the purchaser would be  
9 obligated for the transportation and storage costs.

10 MR. BARNETT: But the importer cannot ship  
11 it under bond to his own facility.

12 MR. ENGLAND: That's right. The article,  
13 the statute is clear on that, too. Lacking prior  
14 notice, and it is being refused or being held as a  
15 result of lack of prior notice, the article cannot  
16 be delivered to the importer, owner, or consignee,  
17 and that's significant in a sense because virtually  
18 every food at this stage is being imported and then  
19 released to the importer, owner, or consignee  
20 before FDA has made a determination.

21 But if it lacks a prior notice, then, that  
22 is not permitted. The article will either be held

1 at the port of entry or directed into secure  
2 storage. It is also a prohibited act if they  
3 import or offer to import food and they fail to  
4 comply with the prior notice provisions.

5 MR. BARNETT: George, what happens if  
6 prior notice is submitted, but it is not adequate?

7 MR. BRUSH: Well, let's talk about  
8 inadequate might mean. The FDA's prior notice  
9 system will not return an electronic confirmation  
10 unless the prior notice submission and its  
11 mandatory fields have been completed, so it is not  
12 possible, if you have had this electronic  
13 confirmation, to have an incomplete submission.

14 A physical comparison may be required if  
15 the submission, if the submission, when compared to  
16 the food at the port of entry, is inadequate or  
17 incomplete. In this case, the imported food would  
18 be denied entry into the United States as an  
19 inadequate prior notice.

20 MR. BARNETT: And, Ben, once again, it  
21 would be held?

22 MR. ENGLAND: Well, in fact, it could be

1 refused entry, held at the port, and if FDA directs  
2 so, it would go into secure storage. If it goes  
3 into secure storage, then, the importer, owner, or  
4 consignee would be responsible for the  
5 transportation and storage costs again, as well as  
6 the fact that again if it lacks prior notice, then,  
7 it's a prohibited act under the statute.

8 Now, the timeliness can also be an aspect  
9 of inadequacy.

10 MR. BARNETT: That could make it  
11 inadequate, it could be a perfectly good form, but  
12 submitted too late.

13 MR. ENGLAND: That's very possible, and if  
14 that's true, then, you are going to end up with a  
15 delay because of the timeliness issue,  
16 particularly, for instance, if you give me prior  
17 notice, give us prior notice on Tuesday and the  
18 shipment arrives on Tuesday, at that stage, the  
19 prior notice will be inadequate, and it would be  
20 subject to refusal and certainly some kind of a  
21 review is going to have to be done on it.

22 MR. BARNETT: Okay. I am getting a little

1 concerned, looking at the clock. We don't have a  
2 lot of time, and I do have a lot of faxes that have  
3 come in, so I am going to ask you to, don't talk  
4 too fast because we have a translator here, but  
5 keep your answers as brief as possible.

6           Leslye, I wanted to ask you, suppose it  
7 isn't timely, and the prior notice arrives too  
8 late, and therefore the shipment is being held. Is  
9 there any way to rectify that?

10           MS. FRASER: Yes. The importer or the  
11 purchaser or their agent still can provide the  
12 prior notice, but again, it has to be noon of the  
13 day, the calendar day before arrival. If it's  
14 arrived, it still would be held for that day for  
15 FDA to be able to examine it, inspect it, and make  
16 decisions, and there would be possibly storage  
17 costs associated with it.

18           I wanted to add one thing to inadequate.  
19 Your notice also can be inadequate if you have told  
20 us you are going to amend it in your initial  
21 submission and you fail to include the amendment  
22 and give us the update. Then, it also would be

1 held because we would be looking for a complete,  
2 accurate prior notice submission.

3 MR. BARNETT: Right, it wouldn't be there.  
4 Right, right.

5 Bob, let me ask you, what is the next step  
6 with this prior notice regulation, what is going to  
7 happen now?

8 MR. LAKE: Well, first, a complete  
9 transcript of today's session will be prepared  
10 including French and Spanish translations, and that  
11 will be put on FDA's web site.

12 Again, as with the earlier proposal that  
13 we talked about, the most important thing is for  
14 the audience and other interested parties to now  
15 submit their comments to the Food and Drug  
16 Administration.

17 The comment period will be open for 60  
18 days following publication, which should be  
19 shortly, and FDA again will review all of the  
20 comments that are submitted to this docket.

21 It is important that, again, that you  
22 include the docket number with your submission, and

1 for this proposal, the prior notice proposal, the  
2 docket number is 02N-0278, and that will assure  
3 that it get to the proper place for FDA review.

4 MR. BARNETT: Well, before we go to the  
5 pile of faxes, let me tell our audience you still  
6 have some time. We have about 5, 10, 15, about 17  
7 more minutes. We still have time for a few faxes.

8 One thing we have not gotten yet is a  
9 phone call, so you still have time for that. Call  
10 us and ask us your question live on the air.

11 Okay. Let me go through some faxes here.

12 This one says we have a number of  
13 questions that ask that we clarify the role of the  
14 submitter, U.S.A. importer, owner, and purchaser.  
15 For example, what is the responsibility and  
16 liability of the U.S. agent? For example, if prior  
17 notice is not made, will there be penalties, will  
18 penalties be served on the U.S. agent when the  
19 owner is a foreign company?

20 MR. LAKE: I think that is one on which we  
21 would like to get comment, I have a couple of  
22 points to make. One, these proposals or FDA's

1 regulations generally don't make determinations of  
2 liability among private parties. That is generally  
3 reserved to contracts among those parties.

4 The real consequence, because of the way  
5 the statute is crafted and the proposal is written,  
6 is that if prior notice is not submitted, the  
7 product simply won't be allowed into the country,  
8 so that would have to be remedied by someone in  
9 order for the product to come into the U.S.

10 MR. BARNETT: All right. This one says  
11 will this system entirely replace the current  
12 requirements for FDA entry information?

13 MR. ENGLAND: The answer is no, because  
14 some of the information that we use for our current  
15 admissibility is not in prior notice. Now, I say  
16 that, but the other piece to that is that as FDA  
17 and Customs works together in the development of  
18 ACE, the goal--

19 MR. BARNETT: Define ACE again.

20 MR. ENGLAND: ACE, I am sorry, it is the  
21 Automated Commercial Environment Customs is--

22 MR. BARNETT: For the Customs, right.

1 MR. ENGLAND: And FDA, along with other  
2 agencies that interact with imported articles, are  
3 in the process of continuing to design a data  
4 element set, so that when someone is interacting  
5 with the government with regard to international  
6 trade, they would only have to submit the  
7 information that is in that set, and prior notice  
8 data would fall into that set, as would our other  
9 data that we used for admissibility.

10 So, it is not that the prior notice would  
11 replace the other data, it is that both prior  
12 notice and our admissibility data would, together,  
13 go into the other set.

14 MR. BARNETT: The new system.

15 MR. ENGLAND: Right.

16 MR. BARNETT: Okay. It says can the panel  
17 please elaborate on imports for export entries, in  
18 other words, in bond, transportation, and export or  
19 immediate export?

20 MR. ENGLAND: Elaborate in terms of, I  
21 presume, that prior notice is required. If it's a  
22 food--

1 MR. BARNETT: I guess.

2 MR. ENGLAND: If it's a food and it's  
3 being imported, then prior notice is required, and  
4 each of those are examples of importation of food.

5 MR. BARNETT: It says imports for export  
6 entry.

7 MR. ENGLAND: That's right, but they are  
8 imported.

9 MS. FRASER: They start out as imported.

10 MR. BARNETT: And that is the key, that  
11 they start as imports.

12 MR. ENGLAND: Right.

13 MS. FRASER: And unlike registration,  
14 which is tied for food, it is facilities, but they  
15 are making food for consumption in the U.S., prior  
16 notice is just tied to food that is imported into  
17 the U.S. regardless of the reason.

18 MR. BARNETT: Here are two of them that I  
19 think you covered, but maybe they are worth  
20 covering again.

21 One says will FDA's system respond 24  
22 hours a day, 7 days a week for prior notice?

1 MR. ENGLAND: It will.

2 MR. BARNETT: Okay. And the other one,  
3 similar, will FDA respond with examinations--well,  
4 not that similar--with examinations 24 hours a day,  
5 7 days a week?

6 MR. ENGLAND: Yeah, that's a good  
7 question, and it is a question that FDA has been  
8 wrestling with for a period of time. We believe,  
9 though, that as FDA learns information about  
10 imported products in advance, it will assist us in  
11 determining what the impact would be for us to do a  
12 24-hour examination.

13 Now, if the prior notice information comes  
14 in, for instance, and it appears to be adequate,  
15 and FDA decides that they want to examine the  
16 shipment for its normal admissibility reasons,  
17 then, we probably would do that at the importer's  
18 premises, not at the port of entry, in which case  
19 it could be done when the goods arrive there.

20 So, it is not a cut and dry FDA will  
21 always be at a port of entry. In fact, not all  
22 port of entries are even open 24 hours. So, FDA is

1 continuing to address that, it is worth discussing  
2 in comments, submitting that as far as the  
3 questioner is concerned, it is worth putting that  
4 in the docket.

5 MR. BARNETT: Here is another one you may  
6 want--I am sorry, did you want to--

7 MS. FRASER: I was just going to add that  
8 it is important to understand that the submission  
9 of a prior notice and receipt of a confirmation  
10 that the notice was adequate and FDA received it  
11 and was able to examine it and make an inspection  
12 decision on it is different from the admissibility  
13 that we currently do.

14 We still will do that current  
15 admissibility, so just because you have submitted  
16 an adequate prior notice, doesn't mean that our  
17 current laws don't apply.

18 MR. BARNETT: Again, this is one that you  
19 also might want to get comments on. If an import  
20 shipment comes in via a carrier that does not use  
21 bills of lading numbers as is the case with many  
22 land border truck carriers, and no Customs entry

1 number is known or assigned until the shipment  
2 reaches the U.S. border, then, how can a Customs  
3 entry or reference number be provided as part of  
4 the advance notice?

5 I will let you answer that one, and then  
6 go on.

7 MR. ENGLAND: It's an excellent question.  
8 It definitely belongs in a response to the docket  
9 for comments unquestionably. I would also say,  
10 though, that as the goods are arriving, somebody  
11 knows those goods are coming, and a reference  
12 number can be assigned to them. The question is  
13 whether they currently are being assigned to them.

14 So, that is the current thought on it, but  
15 we are definitely interested in hearing the  
16 comments to the docket.

17 MR. BARNETT: Let me read the rest of it,  
18 I think maybe you covered it. It says if no such  
19 number is available, how can one be provided? What  
20 alternatives or options are available to the  
21 importer for data elements that simply do not exist  
22 at the time the prior notice must be submitted?

1 MR. ENGLAND: Right, and they actually can  
2 exist. It is just that the current business process  
3 quite normally does not incorporate that number  
4 into the way that it runs and the way imported  
5 goods move.

6 For instance, the Customs brokers have the  
7 entry numbers, and they can, in fact, provide them  
8 or submit the prior notice themselves and designate  
9 that number for the food import that is to be  
10 anticipated the next day.

11 That would also be true for  
12 non-consumption entries, because they all come in  
13 under some kind of a reference number for Customs'  
14 purposes, and those numbers can be known, and they  
15 can be known in advance.

16 But again, that is definitely worth  
17 comments as far as what the impact of that is.

18 MR. BARNETT: Okay. Here is one that says  
19 is a broker required to submit information to the  
20 FDA both via OASIS and through the FDA web site?

21 MR. ENGLAND: The prior notice system,  
22 until the prior notice system, until we are able to

1 incorporate that into the Customs' ACE system, we  
2 will have a stand-alone system, which means the  
3 answer is yes, there will be a prior notice  
4 submission and the broker would also still have to  
5 do their submission through the current ACS system,  
6 which is how that is interfaced into OASIS.

7 That probably sounds like alphabet soup to  
8 people who are not used to it. It sounds like it's  
9 a broker who understands the answer, but again,  
10 these are all worth discussing in the docket. They  
11 are all worth putting information into the docket.

12 MR. BARNETT: This one says can you  
13 clarify the need or requirement of lot codes on  
14 prior notices? Lot codes can and are assigned  
15 electronically at the time of the shipment, which  
16 is after or outside of the minimum time window,  
17 which is noon the prior day.

18 MS. FRASER: Again, that is a good  
19 comment, and those are the kind of comments that we  
20 are interested in receiving, what are the current  
21 business practices, what would it mean if the  
22 proposed rule went forward as its final and, you

1 know, why would that information, should that be  
2 included in an amendment and why.

3 MR. ENGLAND: Right. In fact, I even  
4 would, that's right, maybe through the amendment as  
5 an option, and the other issue is what is being  
6 understood as a lot code is probably worth  
7 clarifying and which we would do as we go through  
8 the comments to the docket.

9 But it sounds like that is a shipper's lot  
10 code. It is where they have designated this is a  
11 group of items that I am putting a lot number on,  
12 so I can track it through my distribution channel  
13 as opposed to a manufacturer's lot code, because I  
14 made them in the same batch.

15 So, you see there is a difference there,  
16 and it may be that they are thinking of the  
17 distributor lot code.

18 MR. LAKE: But let me just comment further  
19 in terms of the comments that we get back. We are  
20 particularly interested in those situations where  
21 the business practices don't seem to line up with  
22 what these requirements are.

1           You know, I could understand there would  
2 be some resistance to that, but I think what we  
3 really need to know in the comments is, you know,  
4 how hard is it to adjust the business practices to  
5 conform with the prior notice versus FDA's need to  
6 have the advance knowledge in order to protect the  
7 American people, and that is the equation we have  
8 to understand.

9           MR. BARNETT: Okay. We have probably  
10 about five minutes and I have got several. I am  
11 going to ask you to, now, don't talk too fast  
12 because we do have a translator, but just keep the  
13 comments short.

14           One of them says what happens when the  
15 system goes down, are there any provisions for  
16 businesses to supply information in an alternative  
17 manner?

18           MS. FRASER: Yes. In the proposed rule,  
19 we indicate that if for some reason FDA's prior  
20 notice system goes down, then, the importer,  
21 purchaser, or their agent can provide the notice  
22 either in person, by e-mail or fax to the district

1 office, the FDA district office with responsibility  
2 for the port where the food is coming in, and there  
3 will be a web site that lists all the district  
4 offices and those ports, so there is provision made  
5 there.

6 MR. BARNETT: Okay. This says if we do  
7 prior notice three days prior to the shipment, but  
8 in loading, not all of the merchandise will fit on  
9 the truck, can the notice be amended?

10 MS. FRASER: Yes, as long as it is the  
11 same product coming in, then, they would amend the  
12 quantity and the product specificity, yes.

13 MR. BARNETT: Okay. This is the last one  
14 I have in this pile. It says to what extent must  
15 each amendment recapitulate the information in such  
16 notices that don't change?

17 MR. BRUSH: You would only be amending  
18 just that piece of new information. We are not  
19 asking you to go back and amend the entire  
20 submission.

21 MR. ENGLAND: So, the system would keep  
22 the prior information.

1 MR. BRUSH: Oh, absolutely, absolutely.

2 MR. BARNETT: We have a phone call. Our  
3 first phone call is from Seattle, Washington.  
4 Seattle, you are on the air, go ahead.

5 CALLER: Good morning. This is a  
6 follow-up actually on the lot code question that  
7 was raised a moment ago. In the current  
8 just-in-time environment, it is not unusual for a  
9 manufacturer to be producing a product that is in  
10 the case of, say, canned goods assigned a  
11 particular lot code number, that it, too, would go  
12 in directly from the end of the processing line  
13 onto a conveyance, that then heads for the United  
14 States.

15 This is particularly true in the air and  
16 land border truck environment, but it applies to  
17 anything that is handled on a highly expedited GIT  
18 basis. This is another instance in which required  
19 duty elements simply may not exist at all 24 hours  
20 prior to the shipment's arrival in the U.S.

21 MR. BARNETT: Thank you, caller.

22 MR. ENGLAND: And I would say this goes

1 back really to the question that was on the fax,  
2 and we would have to reevaluate, for instance,  
3 whether it is the kind of a data element that could  
4 be amended. We will just have to look at that  
5 again.

6 MR. LAKE: But also--this is to get back  
7 to my earlier point--companies that can foods have  
8 a schedule for how they do their coding, and it may  
9 well be that they could get that, you know, that  
10 someone could get that information in advance and  
11 provide it even though the cans won't really come  
12 off the production line until later.

13 MR. BARNETT: Okay. Well, having no more  
14 phone calls, the pile of faxes is exhausted, and we  
15 are exhausted, I will thank you all for a very good  
16 discussion, and I thank you for watching and for  
17 your good questions.

18 We hope you found this broadcast  
19 interesting and I hope you found the information in  
20 it useful. Again, we really want your comments on  
21 these two regulations, so, please, send them to our  
22 Dockets Management Branch.

1           In just a moment, we are going to show  
2   that address on your screen again, as well as the  
3   FDA Bioterrorism web site address where you can get  
4   information on future broadcasts.

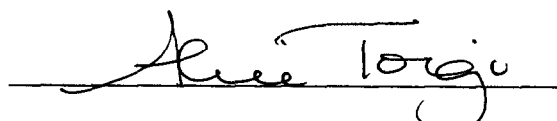

5           Until next time, then, this is Mark  
6   Barnett.

7           [Whereupon, at 2:55 p.m. the  
8   teleconference was concluded.]

9                                 - - -
